LEGEND
● Morgan office
● Morgan mills with over 100 m/s capability
● Morgan mills installed since 1978

In recent years, Morgan Construction Company has completed a successful transition from a U.S.A. company selling internationally to a truly international company. We have established a global network of offices, licensees and agents to provide engineering, manufacturing, procurement, sales and support to customers in their home markets.

We have also invested significant resources toward strengthening our leadership in rolling mills technology,

manufacturing, total quality management, and customer service and support...

worldwide. We continue to build our reputation

as the source for the most accurate, advanced, efficient and

reliable mill equipment available today. We continue to set the industry's

standards for throughput, quality and mill utilization. Our Process Control System

Division has introduced advanced mill automation technology such as continuous-vibration

monitoring and roll-management systems. Our MORGOIL® Bearings Division has made a similar

global service transition. MORGOIL Bearings have now been used on more than ten thousand mill stands around the world for even the most severe applications.

We strive to build trust with our customers by consistently meeting our performance claims for production speeds, mechanical and metallurgical properties of the end product, for effectiveness of our process control systems and for our level of commitment to classroom and on-site customer training and operations support.

Our primary mission is to be the preeminent designer and producer of high quality rolling mill products and services in the world. By doing so, we are committed to helping our customers remain competitive and profitable over the long-term, as part of our goal to remain as the industry's technological leader.

Respectfully,

Philip R. Morgan
